

GEYCCI SPA SEO PERFORMANCE REPORT

(LAST 28 DAYS)

1. Executive Summary

Over the last 28 days, Geycci's website has begun establishing measurable visibility in Google Search, indicating that the SEO foundation is now active and search engines are indexing the site. According to Google Search Console, the website recorded **775 impressions**, **8 organic clicks**, an **average CTR of 1%**, and an **average position of 9.7**. This suggests that the website is already appearing in search results for relevant queries and has started gaining traction in Google's index.

On Google Analytics 4, the site recorded **221 total sessions**, with **25 sessions from Organic Search**, representing **11.31% of total traffic**. Notably, organic visitors demonstrated stronger engagement quality than direct visitors, with an **engagement rate of 68%** and an **average engagement time of 1 minute 29 seconds**. This indicates that users arriving through search are relevant, interested, and more likely to be qualified visitors.

At this stage, the SEO outlook is promising but still in an early growth phase. Visibility is increasing, but click-through rate remains low, which means the next phase should focus on improving search snippet attractiveness, strengthening page targeting, resolving technical SEO conflicts, and building stronger local search relevance for Abuja-based keywords. Overall, the site is not underperforming; it is in the early indexing and optimization phase and now requires structured improvement.

2. Reporting Objectives

This report evaluates:

- Current organic search visibility
- Search performance and keyword traction
- Traffic acquisition trends
- User engagement from organic traffic
- Technical SEO obstacles affecting growth
- Recommended actions for improved ranking and conversions

3. Data Sources Reviewed

This report is based on:

- **Google Search Console**
- **Google Analytics 4**
- Internal observations from current website structure and domain behavior

What Search Console tells us

Search Console explains:

- what keywords show the site on Google
- how often the site appears in search
- whether users click
- what ranking positions the site is earning

What Google Analytics tells us

Google Analytics explains:

- how many users came to the website
 - where they came from
 - whether they stayed and engaged
 - how strong the traffic quality is
 - which traffic sources are more valuable
-

4. Key SEO Metrics

Google Search Console Performance

- **Total Clicks:** 8
- **Total Impressions:** 775
- **Average CTR:** 1%
- **Average Position:** 9.7

Google Analytics 4 Traffic Acquisition

- **Total Sessions:** 221
- **Total Engaged Sessions:** 105
- **Overall Engagement Rate:** 47.51%
- **Average Engagement Time Per Session:** 40 seconds
- **Events Per Session:** 5.97

Channel Breakdown

Direct

- Sessions: 149
- Share of total traffic: 67.42%

- Engaged sessions: 64
- Engagement rate: 42.95%
- Average engagement time: 32 seconds
- Events per session: 5.66

Organic Search

- Sessions: 25
- Share of total traffic: 11.31%
- Engaged sessions: 17
- Engagement rate: 68%
- Average engagement time: 1 minute 29 seconds
- Events per session: 6.80

Organic Social

- Sessions: 25
- Share of total traffic: 11.31%
- Engaged sessions: 16
- Engagement rate: 64%
- Average engagement time: 32 seconds
- Events per session: 6.96

Unassigned

- Sessions: 14
- Share of total traffic: 6.33%
- Engaged sessions: 5
- Engagement rate: 35.71%
- Average engagement time: 57 seconds
- Events per session: 6.21

Referral

- Sessions: 8
- Share of total traffic: 3.62%
- Engaged sessions: 3
- Engagement rate: 37.5%

- Average engagement time: 33 seconds
- Events per session: 5.63

5. Performance Analysis

5.1 Organic Visibility Has Started

The website has achieved **775 search impressions** within the last 28 days. This is a positive early-stage indicator that Google has crawled, indexed, and started testing the site in search results. For a site still in its optimization phase, this is a healthy sign of visibility growth.

5.2 Ranking Position Is Encouraging

An **average position of 9.7** means the site is already appearing around the bottom of page one or top of page two for some search appearances. That is not yet a strong commercial ranking, but it is a solid baseline. It indicates that with focused optimization, the site has room to move upward.

5.3 CTR Is Low and Needs Improvement

The **1% click-through rate** shows that although the site is being seen, users are not clicking at a strong enough rate. This usually points to one or more of the following:

- weak page titles
- weak meta descriptions
- low search intent alignment
- limited authority versus competitors
- branded-only visibility without broader commercial reach

This is one of the clearest improvement opportunities.

5.4 Organic Traffic Quality Is Strong

Although organic search only contributed **25 sessions**, those users showed some of the strongest quality metrics:

- **68% engagement rate**
- **1 minute 29 seconds average engagement time**
- **6.80 events per session**

This means organic traffic is not random traffic. People arriving from search are interacting meaningfully with the site. That is important because it suggests that as visibility grows, the traffic has a good chance of converting.

5.5 Direct Traffic Dominates

Direct traffic accounts for **67.42% of total sessions**, which likely means the current audience is still mostly coming from known brand awareness, internal sharing, manual link access, or marketing touchpoints outside search. This is normal at this stage, but over time the business should aim to increase the share of traffic from Organic Search.

6. Core Insights

- **Insight 1: The website is beginning to rank, but SEO is still in its foundation stage**
The site is now appearing in search results, which confirms indexing and early discoverability.
 - **Insight 2: Organic visitors are more engaged than general users**
Organic Search traffic has a much stronger engagement profile than Direct traffic, meaning search users are likely more intent-driven and valuable.
 - **Insight 3: Search visibility is ahead of click performance**
The site is being shown more often than it is being clicked. This signals that snippet optimization and keyword targeting need attention.
 - **Insight 4: The current SEO pattern is healthy for an early-stage setup**
There are growing impressions, some clicks beginning, a respectable average position, and good organic engagement. This means the setup is alive and working, but requires optimization to scale.
-

7. Technical SEO Obstacles

Issue 1: Search Result Cannibalization from Indexed Staging Site

URL: <https://geyccispa.webflow.io/>

The conflict

A legacy development or staging environment has been indexed by Google.

Impact

This creates serious SEO confusion because:

- it competes with the live domain for the same keywords
- it can split impressions and clicks between two versions of the same website
- users may land on an incomplete or less professional version of the brand
- Google may struggle to understand which version is the canonical authority

Recommendation

The staging site should be decommissioned immediately or set to **noindex**. If possible, all relevant staging URLs should also be removed from search results and redirected appropriately.

Issue 2: Poor Domain Continuity on Booking Flow

Booking URL: <https://cneterp.goodland.africa/.../geycci-spa>

The conflict

The core conversion action happens on a separate external domain rather than a branded Geycci subdomain or path.

Impact

This creates three major problems:

Trust signal risk

Users may feel uncertain when redirected away from the main brand domain during booking.

SEO authority loss

High-intent user actions are happening outside the main website ecosystem, which weakens the ability of geycci.com to consolidate authority around commercial keywords.

Tracking limitations

Cross-domain tracking is more complex and may lead to gaps in data around where bookings originated, reducing attribution clarity.

Recommendation

The business should explore using a branded booking structure such as:

- booking.geycci.com
- book.geycci.com

A CNAME or branded masking solution would improve user trust, preserve domain consistency, and strengthen long-term SEO value.

8. On-Page SEO Review

Homepage SEO Optimization

The homepage should be treated as the primary authority page for branded and broad local terms. Current CTR suggests the homepage title and meta description likely need refinement.

Recommended focus:

- stronger keyword targeting
- inclusion of Abuja in title and meta description
- clearer value proposition in search results
- stronger click intent language

Service Page SEO Optimization

Each major service should have its own optimized landing page rather than relying on broad copy from the homepage.

Priority service pages should include:

- Spa treatments in Abuja

- Massage services in Abuja
- Beauty and wellness services
- Luxury spa packages
- Any signature Geycci offering with search potential

These pages should target both service intent and local intent.

URL Optimization / URL Structuring

URL structure should remain:

- short
- readable
- keyword relevant
- consistent

Examples:

- /massage-spa-abuja
- /facial-treatments-abuja
- /spa-packages-abuja

This improves both SEO clarity and user understanding.

9. Local SEO Opportunity

Since Geycci operates within a location-dependent market, local SEO should be treated as a top priority.

The website should be optimized around Abuja-based searches, such as:

- spa in Abuja
- best spa in Abuja
- massage spa Abuja
- luxury spa Abuja
- facial treatment Abuja

To support this, the business should strengthen:

- location mentions in title tags
- local keywords in headings and body copy
- service + location landing pages
- business information consistency across platforms

- review signals and brand trust indicators
-

10. Actions Already Taken

The following progress has already been made:

- Google Search Console has been connected and verified
 - Google Analytics 4 has been connected
 - Organic search visibility and traffic performance are now being monitored
 - Top channel acquisition data has been reviewed
 - Search behavior and engagement signals have started being assessed
 - Technical SEO obstacles have been identified
 - The site now has a measurable baseline for future SEO growth
-

11. Recommended Next Steps

Immediate Priorities

- Optimize homepage title and meta description
- Identify top-performing search queries and map them to landing pages
- Remove or noindex the Webflow staging domain
- Review booking flow and explore branded domain continuity
- Improve internal linking from homepage to high-value pages

Content and Page Expansion

- Create service-specific landing pages
- Strengthen Abuja keyword targeting
- Add FAQ content tied to search intent
- Publish supporting SEO content for service discovery

Technical and Measurement Improvements

- Review indexing status of important pages
 - Ensure all canonical tags are correct
 - Improve cross-domain tracking for booking flow
 - Set up weekly SEO reporting discipline
-

12. KPI Roadmap

Month 1

Primary goals:

- ensure indexing is healthy
- monitor branded visibility
- optimize homepage and top pages
- resolve staging domain conflict

Month 2

Primary goals:

- increase non-branded impressions
- improve CTR
- build service and location pages
- improve keyword-to-page alignment

Month 3

Primary goals:

- increase organic sessions
- improve ranking for commercial keywords
- strengthen local search presence
- connect SEO traffic to enquiries or bookings

13. Weekly SEO Monitoring Framework

To maintain reporting consistency, the following fields should be tracked weekly in a spreadsheet:

- Week
- Clicks
- Impressions
- CTR
- Average Position
- Organic Sessions
- Engaged Sessions
- Top Query

- Top Landing Page
- Actions Taken
- Notes

This allows management to track trend direction rather than relying on isolated snapshots.

14. Strategic Conclusion

Geycci's SEO performance is in a credible early-growth stage. The website is now visible in Google Search, generating impressions and beginning to attract clicks. Organic visitors are proving more engaged than many other traffic sources, which is a strong sign that the right type of audience is beginning to find the site.

The immediate challenge is not whether SEO is working; it is whether the business will now invest in the next phase of optimization. With improved titles and descriptions, stronger service-page structure, Abuja-focused keyword targeting, and resolution of technical conflicts such as the indexed staging site and off-domain booking flow, the site is well positioned to improve both visibility and conversions.

At this point, the correct management interpretation is that the foundation has been established successfully, early traction is visible, and the next phase should focus on optimization, authority building, and measurable conversion growth.
